

# Malaysia Proven Real - Time BUSINESS SOFTWARE

## POWER FEATURES

- SQL client-server architecture
- Truly real-time automatic posting
- User-friendly screen interface
- User access right control
- User audit trails
- External file handling
- Advanced analysis tools
- System reminders
- Online help
- Powerful search engine
- Powerful report writer
- Date sensitive report output
- Daily bank reconciliation
- SQL intelligence queries wizard
- Scheduled backup without exclude on-line users
- Contra for AR & AP can be made easily in journal entry
- Multiple report format for the same report type
- One click to email the document and report
- Zoom-in from graphs/ reports to source document
- Export as external file format  
(e.g. excel, word, PDF, jpg etc.)
- Real-time in wide area network

QnE business solutions are designed for business running in networking environment (e.g. LAN or WAN) with special attention to "**Malaysian Market**". This software has the most advanced search engine and report writer for users to generate unlimited customized reports.

## FACTS ABOUT

### Real-time processing

QnE modules are fully integrated. When you update the information in the system, all other related areas will be instantly updated.

### Speed

Typical accounting system are based on file-based system that move the entire data over the network. However, QnE is based on client-server system that only sent SQL queries to the server, thus, heavy data processing over the network will be much faster.

# QnE

Users Connected Information					
User Code	User Name	PC Name	IP	Login Time	
YEE	LEE WAI YEE	pc101	192.168.100.101	02/07/2008 5:38:25 PM	
SAM	M.L SAM (Ext: 108)	Server	192.168.100.108	02/07/2008 6:46:42 PM	

Total Users Connected : 2

OK

Want to know who is currently connected to the system and how long they have logged into the system?

## Data size handling

With SQL client/server database , QnE handles much higher data limit compare to file-based systems.

## Data corruption

In a file-based system environment, should the client's computer, network or server failed during data updating process, the entire database may be easily corrupted. However this is unlikely for QnE when a UPS is installed in the dedicated server.

## Scheduled backup

QnE allows users to perform scheduled backup at a specified time without having the on-line users to exit from the system.

## Report writer

Built-in powerful report writer that enable users to customize their reports as desired.

## Export as external file format

You can export QnE reports as other file format e.g. Text, Word, Excel, Lotus, Quattro pro, PDF, JPG, BMP, HTML, XHTML etc.

## On-line help

User information guide is available online, where you just need to click on the on-line help button and then click on the field which you want to query.

## User audit trails

Enable tracking for previous activities and actions done on the system by individual users. (e.g. what information they have amended in the particular invoice etc.)

## Graphs analysis

## Intelligence SQL queries wizard

Allow users to generate ad-hoc queries on the database, users may perform simple or complex queries using filter operators or SQL statements. You can view the queries results on screen and customise the screen with grouping, sorting or pull & remove the necessary fields. You can also save & export it to excel, HTML, XML, & Text file format.

## GENERAL LEDGER MODULE

The General ledger is designed according to the needs of the current market and represents the contemporary and most up-to-date book-keeping techniques it offers convenient and real-time information to users with more than 70 industry-specific and ready-made templates for quick startup.

### New Company Set Up

(Over 70 pre-set business sample Chart of Accounts to meet the needs of different businesses.)

## HIGHLIGHT

- Real-time automatic postings from various modules
- Multiple companies (depending on licenses purchased)
- Multiple level in chart of account
- Multiple level of valid posting periods
- Unlimited accounting periods
- Unlimited sets of running number  
(e.g. payment voucher no. for different bank, petty cash etc.)
- Optional month-end and year-end closing
- Powerful budgeting capabilities
- Date sensitive report output
- Extensive comparative and historical data
- Extensive zoom in facility  
(e.g. profit & loss report allow to zoom-in to general ledger and the source documents etc.)
- User-friendly source document design
- Cash flow status report
- Cash flow forecast report
- Copy details from previous JV, PV and OR
- Contra for AR & AP can be easily made in journal entry
- Tracking on unpresented cheques & uncredited funds everyday

Cash flow forecast

Creating chart of accounts made easy...

The screenshot shows a software window titled "Payment". It has fields for PAY TO, PAYMENT BY, DATE, and CASH SOURCE. The PAY TO field is set to "Digi-Hut Cheras - Office Rental for Feb 2003". The PAYMENT BY field is set to "BANK BNP PUTRA COMM". The DATE is "01/02/2003". The CASH SOURCE is "SCB 224011". Below these fields is a table with columns: Acc Code, Acc Desc, Description, Project, and Amount. One row shows "4-00-1400 OFFICE RENTAL For Feb 2003" with an amount of "650.00". At the bottom, there are buttons for Project, SUB TOTAL, BANK CHARGES, and TOTAL, all set to "650.00". On the right side of the window, there are standard menu options: Previous, Next, Save, Delete, New, Search, Print, Prev/Next, Journals, Close, and Help.

able to reset the voucher no. automatically according to the date of the voucher.

leg.PV0302/002 represents the 2nd voucher in February 2003, PV0405/003 represents the 3rd voucher in May 2004!

## ACCOUNTS RECEIVABLE MODULE

The accounts receivable module is designed to enhance productivity and efficiency of a company's receivables by providing up-to-date information on business transactions.

The accounts receivable (AR) module provides function that allows users to generate real time statement and reports for in-depth analysis on receivables and collections by period, geographical area, customer category, customer status and salesperson.

Allows you to print the customer documents in other program directly.

## HIGHLIGHT

- Accept multiple payment method from customer
- Generate interest charges for overdue customers
- Open credits reports
- External file handling in customer accounts
- Able to define budgets for individual customer sales
- Able to scan debtor code using barcode scanner
- Able to print debtor code in barcode format
- Able to hold posting of post-dated cheques received that are yet to bank-in.
- Filtering outstanding balance in credit-limit report
- Filtering by number of days/months outstanding in invoices report
- Outstanding invoices report
- Mail merge  
(able to create letters or notices for customers via fax/email)
- Email Reminder Letters/Statement/Letters to All the customers at one click.

Customize customer overdue reminder letter to be sent by email.

Generate interest charges for overdue customers

To check which customer's invoices are due for certain periods.

## ACCOUNTS PAYABLE MODULE

Accounts payable is designed to efficiently manage a company's expenditures. QnE helps you to keep accurate information on your cash management by carefully tracking and taking advantage of term discount, predicting cash requirements and tracking payment to ensure they are made only once.

Generate the supplier code automatically, users no need to check the last supplier code when creating a new supplier account.

Purchase Budget By Vendor function allow users to tracked budgeted purchases from a particular vendor for a specified period.

This function provides a useful management tool for users to manage their purchases from vendors.

## SALES MODULE

The sales module is a powerful module that manages the entire sales cycle for users. This module provides quotation, sales order, delivery order, invoicing and sales return. This module also provides functionality to manage customer back-order fulfilment, thus, increasing your customer satisfaction. The sales module is tightly integrated to accounts receivable module, inventory control module and credit control module. This will provide users with all necessary information to manage customer's account. With the sales module, managing your customer is never easier and users can have a more effective customer relationship management tool.

**Advance Price History Analysis**

An analysis tool for you to sum-up, filter, grouping, customize the sales historical data for all different sales records types, for example, quotations, orders and invoices etc., It's a "musthave" tool for Sales Manager.

## HIGHLIGHT

Accept multiple payment method in cash sales

Packing unit of measurement for quick calculation of quantity and display

Comprehensive price group, price tag, price book and discount book

Price group can be setup depending on different group of customers, for example, distributor or retailer.

Price tag enables you to rename and setup unlimited price tags for stock items, for example, price tags for US Dollar, Singapore Dollar, Ringgit Malaysia etc.

Price book and discount book enable you to set up quantity discount and prices for certain category of customers or certain category of the stock items in a specific periods etc.

### Picking list

Stock picking for delivery with item quantity grouping by specific delivery orders, invoices, area and lorry driver etc.

### Users behavior billing control

Option to provide control e.g. delivery order must transferred only from sales orders instead of enter it directly.

### User access right and defaults for form formats

Different users from different branches can issue different invoice format, however data will be shared in the same database.

### Profit estimator

Check the profit margins of stock items you are currently quoting or selling to your customers.

### Stock bundling

Setup bundling of the products or services sold as a package for quick invoicing.

### Partial delivery

Partial delivery from a single sales order.

Multiple sales orders to one delivery order.

Multiple delivery orders to one Invoice etc.

### Point of sales integration

Interface with customer display Unit, cash drawer, barcode scanner, and selected brand and model of barcode printers.

Document & report

## HIGHLIGHT

### Landing cost

Able to calculate cost proportion on indirect cost (e.g. custom duty, freight charges etc.) and charge into product costing.

### Intelligent cost capturing

Optional to capture product cost in purchase invoice after transfer from goods received notes which users didn't enter any cost in GRN.

### Users behavior purchases operation controls

Option to provide control purchases invoice must be transferred from goods receive note instead of transferring directly from purchases orders or enter it directly.

### Partial delivery

Partial delivery from a single purchases order.

Multiple purchase orders to one goods received note.

Powerful inquiry tool for those purchases requisitions that not approve yet.

Multiple supplier delivery orders to one invoice,etc.

information about the liabilities status when viewing the financial reports.

### Accrual stock receive posting account

Option to post the account entries to a temporary accrual account for those uninvoice GRNs. This will help the management to have more accurate

### Multi-level of purchases requisition approval control

Inform purchaser the outstanding purchase request from the users via email and information on the item requested is only a click away.

## INVENTORY CONTROL MODULE

YOUR organization's inventory represents a significant investment of financial resources. Managing it can be a monumental task. QnE takes detailed management and operations report to track and control items you assemble, stock and sell. The inventory control module gives you the information you need to make order forecast and track cost of goods sold. This module will make inventory management easier, more efficient and effective for the company.

BOM allows you to define different set of formula of the materials.

# HIGHLIGHT

## Alternative inventory costing method

FIFO, FIFO with future cost, weighted average, last purchased price, fixed cost and LIFO.

## Serial number

Track serial numbers from purchases through sales in all inventory transactions and you will be able to know which serial number is still available in your stock balance. This functionality is crucial for warranty and repair tracking.

## Batch & lot number

Tracks batch or lot numbers and expiry date from purchase through sales in all inventory transactions provides batch/lot numbers that are still available in stock and batch/lot that numbers are almost near to the expiry date which consider as un-sellable items. This is specially useful for food and beverage industry.

## Multi-set of bill of materials

For material planning, stock assembly & wastage analysis.

## Productions control

Stock issued for production and non-production, material consumptions, finished goods produce and production rate control by batch or period etc.

## Stocktaking facilities

Stocktaking using wireless scanner, results update to the system directly and show variances in between the stocktaking results and system balances. Adjustments can be created by the system automatically.
